

AI Video Analytics Solution for Confined Space Monitoring

POWERED BY
Carry AI

The system consists of two weatherproof cases, namely the monitoring station and equipment unit.

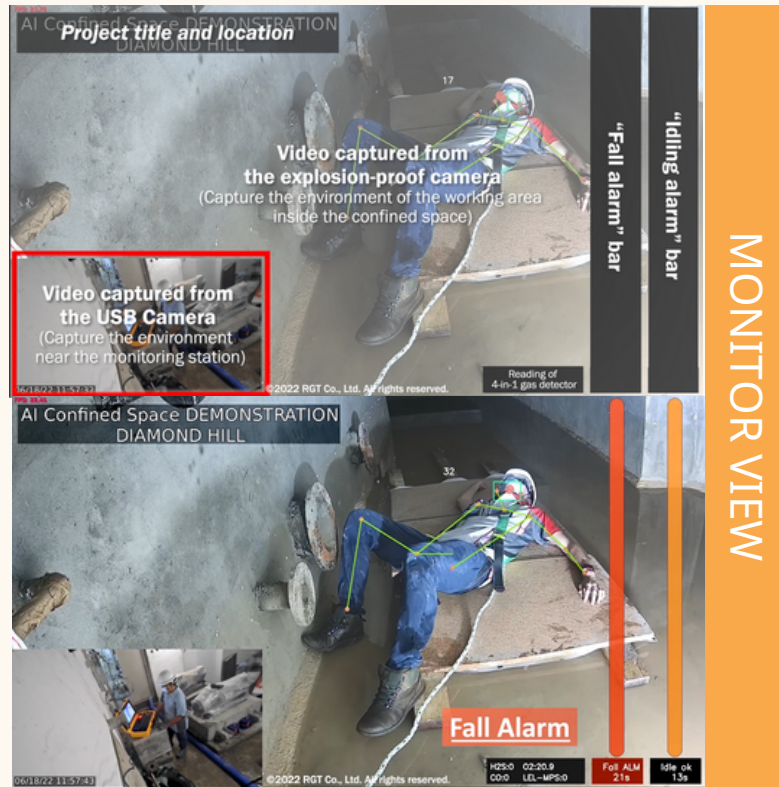

Equipment Unit

- Explosion-proof camera (with cable and mounting clamp)
- USB camera (with cable)
- 4-in-1 gas detector
- Power cord
- Safety wire slings

Monitoring Station

- Controller with USB ports and LAN ports
- Monitor
- Visual and audible alarm
- Wireless keyboard

MAJOR FEATURES

Human Pose Detection : Fall Alarm & Idling Alarm

Toxic Gas Detection

Live stream & Video recording

Cloud Platform

REAL APPLICATION

A.I. Video Analytics Technology

Pose Recognition

- AI - Deep Learning
- Able to reconstruct 18-points in skeleton
- High accuracy in detection of actual body state
- Able to detect multiple pose at same time

- Head: Nose, L+R eye, L+R ear
- Upper Body: Neck, L+R Shoulder, L+R Elbow, L+R Wrist
- Lower Body: L+R Hip, L+R Knee, L+R Ankle

Human Pose Detection - Idling alarm & Fall Alarm

Operation

1

Place the monitoring station outside the confined space, connected with USB camera

3

Worker carrying a 4-in-1 gas detector, the reading and alarm will be sent to the cloud platform in real-time basis, and also will be shown on the monitoring station

4 Upload the captured video and information to cloud platform via 4G network

2

Mount the explosion-proof camera inside the confined space, connect it to the monitoring station

5

Video and information can be viewed via internet browser, and real-time notification will be sent by SMS and/or email
